How to calculate NOPS

For slalom and tricks, multiply the actual performance by the *NOPS Multiplier* value for that division.

Example: Mike, a boys 1 slalom skier, has an actual performance of 36 buoys. Mike's NOPS will be: 36 x 15.26717557 (taken from the above table) = 549.6

For jump, multiply the actual performance times the actual performance and then times the *NOPS Multiplier* value for that division.

Example: Jennifer, a Girls 2 skier, jumps 69 feet. Jennifer's NOPS will be: (69 x 69) x 0.19290123= 918.4
