

a.)  $V = \text{constant}$  for  $1 \rightarrow 2 \Rightarrow$  isochoric

b.)  $V_1 = V_2 = (200 \text{ cm}^3) \left( \frac{1 \text{ m}}{100 \text{ cm}} \right)^3 = 200 \times 10^{-6} \text{ m}^3$

So  $PV = nRT \Rightarrow T_1 = \frac{P_1 V_1}{nR}$

and  $P_1 = 2 \text{ atm.} = 2.026 \times 10^5 \text{ Pa}$

So  $T_1 = \underline{1218.4 \text{ K} = 945.4^\circ \text{C}}$

Could also do:  $T_2 = \frac{P_2 V_2}{nR}$

with  $P_2 = 6 \text{ atm} = 6.078 \times 10^5 \text{ Pa}$ .

OR for  $V = \text{const.}$

$$\frac{V}{nR} = \frac{T}{P} = \text{const.} \Rightarrow \frac{T_1}{P_1} = \frac{T_2}{P_2}$$

$$T_2 = T_1 \left( \frac{P_2}{P_1} \right) = \underline{3655.2 \text{ K} = 3382.2^\circ \text{C}}$$
