

$$W_{i \rightarrow f} = - \int_{V_i}^{V_f} P dV = - \left\{ \text{area under } P-V \text{ curve} \right\}$$

$$= - \left\{ \begin{array}{l} \text{area of triangle 1} + \text{area of triangle 2} \\ + \text{area of rectangle} \end{array} \right\}$$

because $V_f < V_i$ for each.

$$= \left\{ \begin{array}{l} \frac{1}{2} (V_1 - V_2) (P_1 - P_2) + \frac{1}{2} (V_2 - V_3) (P_3 - P_2) \\ + P_2 (V_1 - V_3) \end{array} \right\}$$

Converted to MKS:

$$P_1 = 400 \times 10^3 \text{ Pa} \quad V_1 = 300 \times 10^{-6} \text{ m}^3$$

$$P_2 = 200 \times 10^3 \text{ Pa} \quad V_2 = 200 \times 10^{-6} \text{ m}^3$$

$$P_3 = 400 \times 10^3 \text{ Pa} \quad V_3 = 100 \times 10^{-6} \text{ m}^3$$

So:

$$\underline{W_{i \rightarrow f} = 60 \text{ J}}$$
