The Water Cycle
Building Instructions

Materials
-three two-liter bottles with caps
-a drill with a large (1/4” or so) drill bit
-pliers
-drywall screw or old style compass
-two 30 cm strips of cotton shirt, sock, or rag

Before you begin:
Have an adult drill a 1/4” hole in one of the three bottle caps.

1. Remove labels from bottles.

2. Cut Bottle A just below the upper curve.

3. Cut Bottle B just above the curved bottom.

4. Place the predrilled cap on Bottle B. Insert a 30 cm looped strip of rag, sock, or old shirt, so about 10 cm hangs down from the cap.

5. Tie a 30 cm looped strip of rag, sock, or old shirt around the neck of Bottle C so one end hangs down about 5 cm.

6. Assemble.
